AMPD ENERGY

The Future of Mobile Power

Ampd 200 & Ampd 400

Our NextGen Products

AMPD 200

Up to 292 kW / 297 kVA
(193 kW / 214 kVA continuous)

AMPD 400

Up to 585 kW / 595 kVA
(386 kW / 428 kVA continuous)

Ampd products have been in global deployment since 2019 with some of the largest and most innovative industrial companies.

Ampd's advanced, connected and mobile energy storage systems (ESSs) provide quieter, cleaner, more efficient power for the world's industries. Our NextGen products are our toughest, most capable, highest quality and most configurable products yet.

Ampd's NextGen mobile ESS empowers industries to transition to clean energy. Designed to provide power to the toughest and most demanding applications, the Ampd 200 & Ampd 400 have safety, durability, ruggedness, flexibility, and ease of use at its core.

Benefits

Operations

Significant Cost Savings
The Ampd 200 & Ampd 400 deliver substantial operational cost savings by minimizing your diesel consumption and reducing ongoing running costs.

Maximize Operational Efficiency
Reduce or eliminate refuelling, whilst lowering maintenance frequency and cutting unplanned downtime.

Universal Generator Paralleling
Seamlessly parallel with any generator, regardless of brand, size or controller, for immense versatility and flexibility in fleet management.

Instant Response Capabilities
“Instant Response” to rapid changes in load, enabling further generator downsizing and even greater cost, fuel and CO2 savings.

Connectivity

Real-Time Performance Intelligence
Monitor performance 24/7 with Enernet, Ampd’s intuitive remote monitoring, analytics, and automated reporting platform.

Over-the-Air Enhancements
OTA software updates deliver ongoing improvements and new features without disrupting site operations.

Cloud-based Scheduling
Customise the Ampd 200 and Ampd 400’s operating schedule to match the site’s cadence with Enernet’s easy-to-use Schedule Designer.

Safety

Safer Working Environment
Reduce fire risk, fuel handling hazards (such as spillage) and harmful fumes to create a safer workplace for personnel.

Class-leading Electrical Safety
Designed to the highest electrical safety standards, with Category 1 arc-flash hazard and ultra low leakage current.

Built to Global Standards
Certified to IEC and UL by SGS the leading, globally-recognised product certification body for the ESS industry.

SGS IEC UL

Benefits

Sustainability

Reduce Carbon Footprint
Lower your site's carbon emissions by up to 90% by minimising or eliminating fossil fuel dependence.

Reduce Air Pollution
Achieve a cleaner, healthier jobsite with zero direct NO_x, PM and SO_2 emissions.

Quality

Product Quality.
Ampd invests heavily in quality control; manufacturing quality and software quality. The result is fully validated product reliability through hundreds of field hours with full testing. We ensure a fully functional, worry-free product is delivered "out-of-the-box".

Tier-one Battery Cells
The Ampd 200 and Ampd 400 use lithium iron phosphate (LFP) battery cells from CATL–the world's largest battery manufacturer–and are rated for 9,000 cycles at a 100% depth-of-discharge (DoD).

Service

On-the-ground Service & Support
Ampd has dedicated teams of ESS experts in each region we operate, giving unrivalled response times and technical support. Our regional coverage includes locally held spare parts to ensure any downtime is kept to a minimum.

Built for Uptime
Modular architecture with built-in redundancy maximizes reliability, fast servicing and maintains continuous operation.

> *"The Ampd ESS has had a massive impact in a positive way, particularly for the environment."*
