AMPD ENERGY

Clean. Quiet. Connected.

Advanced battery energy storage systems (ESS) providing clean, reliable power for the world's industries.

The power to choose

We at Ampd are focused on driving the energy transition in heavy industries away from diesel generators using our more reliable, mobile battery storage technologies and data science to electrify, connect and optimize your energy requirements.

How Our Products Measure Up

Fully electric

Resulting in zero tailpipe emissions and a lower carbon footprint.

Whisper-quiet

Enabling operations to remain discreet in urban areas.

Full visibility with Enernet

Gain real-time insights through remote monitoring, device management and data analytics tailored to meet the unique demands of industrial sites. *(See page 3 for more details.)*

Higher productivity and more uptime

- Minimal downtime needed for refueling or near-zero maintenance.
- Automatic recharging.

Plug and play

Low amounts of input voltage and amperage are required to power the ESS. Users will see lowered costs and greater efficiency using an Ampd ESS, even if a generator is used to power it. *Compatible with hydrogen- or solar-generated sources, as well.*

Rugged and robust

- Built for challenging environments.
- Designed to withstand tough industrial environments.

Engineered for safety

- Eliminates diesel fire hazards and handling risks like spillage.
- Reduces health and safety risks to site staff.

Make the switch from diesel generators

What an ESS can power*
1. **Tower crane**
2. **Air compressor**
3. **Bar bender**
4. **Concrete pump**
5. **Desander**
6. **Grouting station**
7. **Material hoist**
8. **Twin passenger hoist**
9. **Site office**
10. **Water pump**
11. **Welder for H-pile**

Why choose an ESS vs. a diesel generator
1. ~ 85% less CO_2 emissions than a diesel generator.
2. Better air quality on the job site. No CO, NOx and PM emissions.
3. Eliminates risks associated with diesel spillage and tested to battery safety standard UL9540A.
4. Up to 32 times quieter, allowing for unrestricted operating hours.
5. 10–30% lower overall cost of operation.
6. Remote operations and management (O&M) on a single platform, enabling data-driven decision making.
7. Minimal downtime for on-site maintenance and refueling. ESS has in-built redundancy and less prone to single point failure.

** Provided list of products the ESS can power is not extensive.*

Enernet™

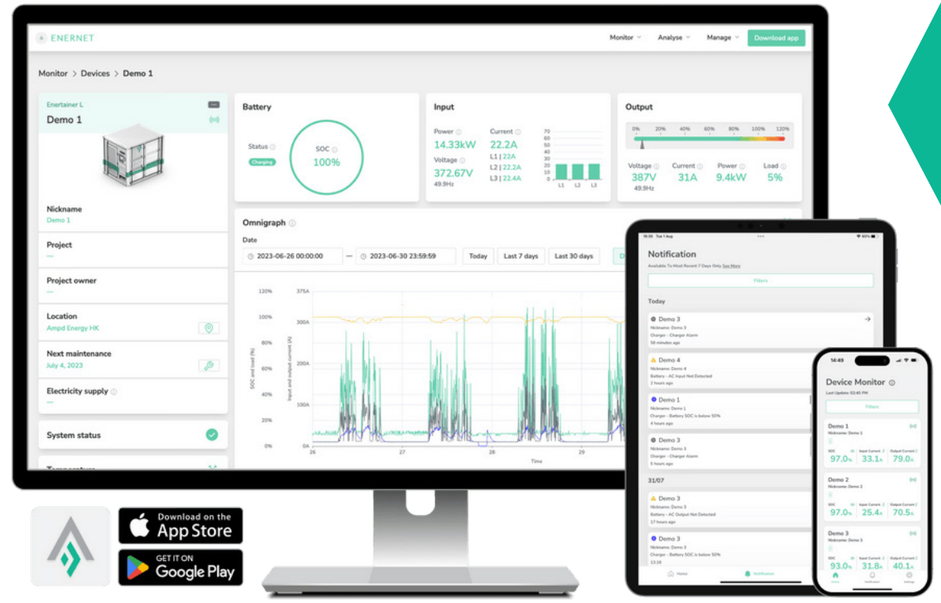

Fleet data and reporting at your fingertips

Ampd Energy's built-in Enernet brings you closer to your energy consumption data so you can achieve your business goals, such as optimizing your operations, reducing carbon emissions, or cutting costs.

- 24/7 real-time data insights and analytics.
- Energy, fuel and carbon calculation engine automatically calculates how much energy your site consumed, and how much fuel and CO_2 your site saved compared to if it were diesel-powered.
- Automatic monthly reporting with operational, energy, carbon and reliability highlights that you can link to your reporting system via application programming interface (API).

Ampd Energy's built-in Enernet connectivity brings you closer to your energy consumption data.

Ampd Energy is committed to ensuring your data is secure and always protected, by adhering to GDPR and CCPA global data protection standards.

The Enertainer

Revolutionizing work sites with unrestricted power

An advanced energy storage system which is available in various configurations and designed without compromise for the tough, dynamic and space-constrained needs of heavy industries.

Specifications

*Enertainer S+	Enertainer M+	Enertainer L+
Nominal: 187 kW / 187 kV	**Nominal:** 213 kW / 313 kVA	**Nominal:** 427 kW / 437 kVA
Overload: 225 kW / 225 kVA	**Overload:** 235 kW / 375 kVA	**Overload:** 470 kW / 525 kVA
Frequency: 50/60 Hz		
Weight: 7.7 tons	**Weight:** 7.8 tons	**Weight:** 9.6 tons
Size: 10.5 L x 8 W x 8.5' ft H (3.2 L x 2.4 W x 2.6 m H)		

Disclaimer: *In the interests of continual product improvement, specifications are subject to change. Please contact us for the latest specifications.*

** Not currently available in South East Asia*

1. **Safety features**
   - A. Flood and hydrogen sensors
   - B. E-Stop button – press to stop and safely isolate the system
   - C. In-built fire suppression system
2. **AC cabinet**
   - A. User-friendly touch screen human-machine interface (HMI)
   - B. Uninterruptible power supply (UPS): internal power supply module with its own back-up battery source
   - C. Battery management system (BMS)
   - D. Eight exhaust fans
3. **DC cabinet**
   - A. Each battery string can provide up to 330 A of DC power.
   - B. HVAC units to maintain the battery modules at a stable temperature during usage

The Ampd Silo™

Compact and scalable

Ampd Silo paralleling provides enhanced flexibility and scalability. Ampd Silos can be connected together to deliver a higher AC output power with higher energy capacity. The communication between them is set so that the output power required is shared and evenly distributed.

Specifications

Ampd Silo S	Ampd Silo M
Nominal: 50 kW / 50 kVA	**Nominal:** 100 kW / 100 kVA
Overload: 57.5 kW / 57.5 kVA	**Overload:** 115 kW / 115 kVA
Frequency: 50/60 Hz	
Weight: 2.5 tons	**Weight:** 4 tons
Model S size: 7.5 L x 5.5 W x 5.9' ft H (2.3 L x 1.7 W x 1.8 m H) **Model M size:** 10.0 L x 5.5 W x 5.9' ft H (3.1 L x 1.7 W x 1.8 m H)	

Disclaimer: *In the interests of continual product improvement, specifications are subject to change. Please contact us for the latest specifications.*

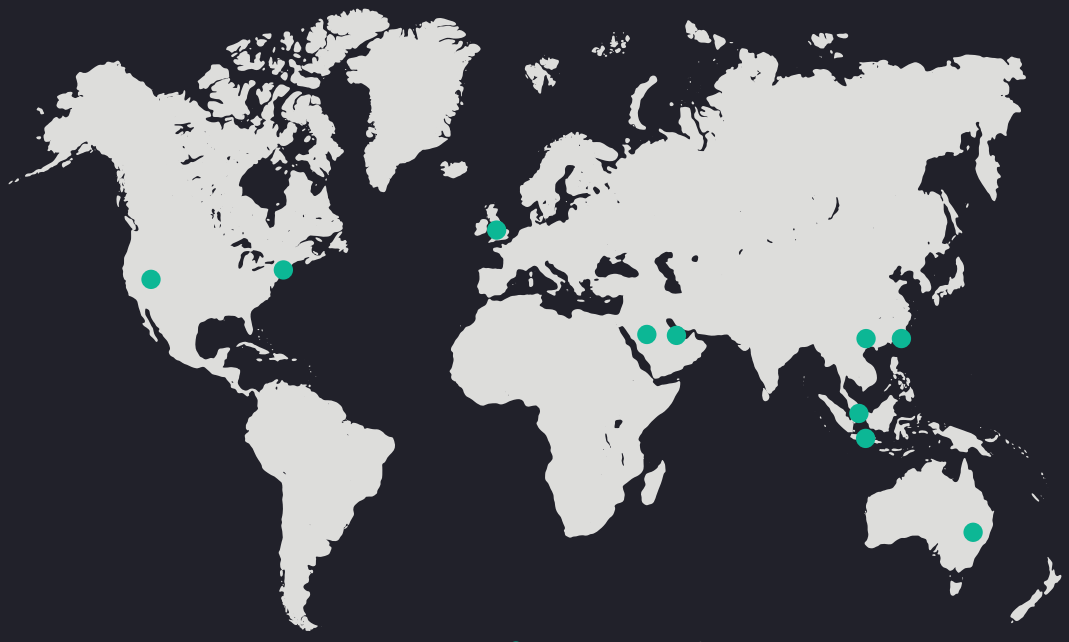

1. **Safety features**
   - A. Flood and hydrogen sensors
   - B. E-Stop button – press to stop and safely isolate the system
2. **Transportability**
   - A. Built for easy transport via forklifts or small cranes
3. **AC cabinet**
   - A. User-friendly touch screen HMI, incliuding alarms and notifications via SMS/Email
   - B. BMS
   - C. Cooling fans
4. **DC cabinet**
   - A. Modular architecture for overall system resiliency
   - B. HVAC units to maintain the battery modules at a stable temperature during usage; 600 W of cooling capacity and 500 W of heating capacity

Ampd Energy

An Emission-Free Future for Industries

Enabling smart, fully automated, connected and emission-free industrial sites for the future with highly efficient and scalable energy management.

Making a positive impact globally

ESS in **9** countries and growing

USA, HK, SG, UAE, KSA, AUS, UK, TW, IND

Over **67,000** tons of CO_2 prevented

220+ construction projects

More than **95,000** cars worth of air pollutants removed

Our story

Founded in 2014, we aimed to be part of the energy transition by building lithium-ion battery products. A few years after our founding, a construction company challenged us to replace their diesel generators with batteries. After extensive exploration, it became clear that not only could they replace diesel generators, but it could be done economically — reducing both environmental and financial costs. In 2019, the Enertainer, the first ESS designed specifically for the construction industry, was born.

Get Ampd up today

Our experienced sales and engineering teams will analyze your requirements and constraints via a detailed project survey. We'll prepare a proposal with product recommendations, a deployment plan, post-deployment care options and clear, transparent pricing.

Let's power the future **together.**
